uncomfortable in situations where an obscure indicator/warning lamp may come on. The back of the owner's manual contains a handy reference to all the indicator and warning lamps, some decidedly much more severe than others. But again, I prefer to keep my manual at home, even though I have a digital copy on my computer. So I put together this
condensed version of all the lamps, the corresponding cause(s), and the suggested action(s). Everything was taken from a post-September U.S. owner's manual. I omitted the obvious ones (turn signals, door open, etc.), and because my E90 is a U.S. model, I didn't include any Canadian-specific descriptions. Jason was kind enough to host this file on
E90post, and to include a nice little logo on the last page! So if you're interested, here are the instructions: 1. Download the image file from . Open in your favorite image viewing program. 2. Print onto 8.5" x 11" paper in Portrait mode. Multi-purpose paper works fine, but photo paper (or slightly thicker paper) is best. The entire image should be
printed onto one side. I would suggest reducing the print margins all around to .3" or less. 3. Once printed, fold in half from top to bottom (printed side facing out). 4. You will then have a tiny 4-page booklet you can store easily. Warning: the icons and font are small, but if I can
                                                                                                                                                                                                                                       E90 330xi 6 MT/ SG / Black Leather / Aluminum / Sport / Cold Weather / CA / PDC / Blacklines / Aluminum Pedals / Alarm / Hardwired Passport 8500 / Momo Shift Knob / LUX 2.0 02-13-2006, 12:22
see them with my awful eyesight, I figure others should be fine. If anyone notices something I need to change, please let me know!

PS yellow battery can also mean: high idle discharge detected. I got this recently when I was messing around with my mmi box on contact on with engine off for like 30 minutes, car didn't like that. When that happened to me, strangely it even added ABS and tire monitor failure at that point, but after starting the engine it was all gone. BMW 3 Series
E90 E91 E92 E93 car warning lights, car warning symbols such as engine management light, ABS light and all of the other car warning signs
on your dashboard. You might need to buy a scanner online which will show BMW trouble codes & reset the warning light for good! If you need to reset a dashboard light or diagnose a fault on your BMW we would recommend the iCarsoft BMM V1.0 BMW OBD Code Reader which will allow you to diagnose & reset BMW trouble codes and warning
lights in the main systems engine, ABS, airbags, transmission and much more. If you need new sensors to fix your BMW E90 E91 E92 E93 3 Series such as ABS sensor, MAF, camshaft & crankshaft, visit www.bavariandominator.co.uk 1. BMW E90 E91 E92 E93 speedometer 2. E92 E93 3 series range, we highly recommend the iCarsoft i910 diagnostic package. It will also give you information on the initial problem and then turn off the warning lights. If you see the following light appear on your BMW, the chances are you need to replace an
ABS sensor. You are advised to use the iCarsoft i910 to find out which ABS sensor needs to be replaced, and then visit www.bavariandominator.co.uk to find the BMW ABS sensor for your vehicle lf you see an engine system. This can be anything from
a minor issue to a major fault, and it should be addressed right away. The engine management light usually appears as a yellow or orange symbol on the dashboard and is accompanied by a warning message. The most common causes of an engine management light on a BMW are a faulty oxygen sensor, a loose or broken vacuum line, an engine
misfire, or an issue with the fuel injection system. Other potential causes include a bad catalytic converter, a faulty ignition coil, or a faulty ignition coil, or a faulty mass air flow sensor. If you notice the engine management light on your BMW, it's important to take your car to a qualified mechanic as soon as possible. They will be able to diagnose the problem and recommend
a repair. Ignoring the warning light can result in further damage to the engine system and potentially costly repairs. 65,4KOver time, the high number of kilometers driven brings a series of breakdowns to BMW models, regardless of the year of manufacture. In this article we will talk about BMW E90 (year 2004-2013) and E46 (1997-2006) dashboard
lights. All BMW E90, E46, etc. cars. have these on-board witnesses to provide information about technical faults. So, some of the BMW's on-board witnesses have an informative role, and some have a warning role when malfunctions occur. The exclamation mark is a warning that a problem has occurred with the machine. The best thing to do is to do
an OBD test. These BMW dashboard warning lights on the board in other colors, green, blue, white, are informative - a sign that you have switched on the headlights for example. There are three main types of warning lights, differentiated by color, each indicating a certain severity of
the situation: Red: They signal serious car malfunctions or safety issues that require you to stop immediately and contact a car service. Examples include low oil pressure warning light or high engine temperature warning light. Yellow (or orange): Indicates a component that is not operating at optimal parameters and may require inspection or
replacement in the near future. Examples include the ABS (anti-lock braking system) warning light or the brake pad wear warning light. Green (or blue): They provide real-time information about the general state of the car, such as whether the headlights are on, the climate system is on, or whether a door is still open. Significance of dashboard
warning lights BMW E90, E46:1. Front fog lights (headlights) 2. A problem with the power steering system 3. Tail lights (rear) 4. Low windshield fluid level 5. Worn brake pad indicator 6.
